iR DATA is the Data Recovery Solution for novice users, users that can not navigate the technical forums and for all other users with limited computer knowledge. iR DATA makes data recovery easy for you. This data recovery software has a simple yet powerful interface. Our data recovery software support scanning and recovery of different formats of all types of drive including Hard Disk, NTFS, FAT, Ext2, Ext3, Ext4, NTFS Formated Compact disk, Hard Disk partition and all other types of partitions. What is the use of a SSD? 1) The performance of SSD is faster than a HDD but the price is much higher. SSD can be used to store and read data quickly, for example, it's faster than a disk, when you copy a large file to SSD you'll find that the

time is reduced. 2) There are so many data inside an SSD, so you can save some space and reduce the risk of losing data. 3) SSD can be used in all digital devices, so you don't need to worry about backup and exchange. 4) SSD will be more reliable than HDD because it's noiseless. 5) All digital devices can store data on SSD, for example, you can use an SSD as an alternative to hard disk, so you don't need to worry about backup and exchange. Key Features: 1) Support USB 3.0 boot. 2) Support booting from a Windows PE ISO image. 3) Support USB 2.0, USB 1.1 and eSATA ports. 4) Support SATA2, SATA3 and PCIe modes. 5) Support PATA, SATA2, SATA3, USB 3.0, USB 2.0, eSATA, PATA and Mini PCI modes. 6) Support Intel 7th Gen CPU. 7) Support 7th Gen Intel LGA1150, LGA1151, LGA1151
